# Hardware Token Import

[Token](#)

## The Inventory For The Hardware Tokens

For each purchase of hardware tokens from RCDevs, RCDevs provide an Inventory file encrypted that contains the tokens seeds. Only your server can decrypt this file: it works with the license.

The Inventory for the hardware tokens in WebADM/OpenOTP allows:

- > to review the token stock
- > to register a token very easily
  - > with the serial number only for the RC200, RC300 & RC400 hardware tokens
  - > pressing a Yubikey
- > to save time when importing a large number of tokens.

First, the Inventory must be imported via the menu **Import** of WebADM/OpenOTP by clicking on the *Import Inventory File* button.

□

Once done, administrators or end-users can enroll the tokens very easily.

The inventory management is available from the menu **Databases** of WebADM by clicking on the link *Inventoried Items*. □

## The Hardware Tokens Registration

Once a token is imported in the inventory database, this inventoried token can be registered very easily:

- > from WebADM by an Administrator
- > from a WebAPP by an End-user.

An inventoried RC200 can be enrolled via the serial number only, a Yubikey by pressing on it or a Yubikey by Manual Registration.
